PRESENTATION – HANDWRITING ANALYSIS FOR HYPNOTISTS

HANDWRITING ANALYSIS FOR HYPNOTISTS

In this informative presentation we will explore how handwriting analysis can be used in a clinical hypnotherapy setting. The unconscious mind controls the pen, so as an ideomotor response, handwriting reflects unconscious behaviors and personality traits.

Discover how analysis of the traits in clients' writing can provide the Hypnotherapist with a valuable tool for their practice. We will look at how to spot possible risk factors in personality, prior to hypnosis, to understand client's personality, gain rapport, and uncover potential blocks to successful therapy.

During this experiential presentation, you will:

- Understand how the physiology and biology of handwriting correlates to the unconscious mind
- Discover practical applications used around the world for assessment of personality
- Identify specific personality traits including intelligence, honesty, self-confidence, deceit, trust, energy, sex drive, and more
- Determine client's emotional outlay, including fears, motivations, & how they will react when under stress
- Signature analysis and progression of suicidal tendency in writing
- You will also be able to transfer this skill to better understand yourself and those in your personal life, as well.

Transpersonal means the crossing of body, mind and spirit. It assumes that humans operate on all three levels or that the mind, body, and spirit of an individual affect each other..."

A person will be selected from volunteers to have a Transpersonal Hypnotherapy Session. He/She would have to agree prior to the start of the session to be recorded during entire session for purposes of ASPH's educational sharing program on Youtube.
